FOR FASTGRID PROJECT: FROM PASCAL TIXADOR & CE BRUZEK

COMPANIES REACHED: RTE, REE, 50 Hz, TERNA, TOSHIBA ITALY, NEXANS NORWAY, RSE, ABB.

Minutes

During the last Best Paths FP7 assembly meeting in Madrid on November 21st 2017, FASTGRID H2020 project was introduced by Pascal Tixador, the coordinator (CNRS-G2Elab), and Christian-Eric Bruzek (SGI) during a half-an-hour talk followed by Q&A session to 20 participants’ audience. As this Best paths project gathers most of the Europeans’ TSOs and equipment suppliers, it was found efficient and more impacting to organize this short presentation meeting during this event.

After a short introduction of superconductivity for different electrotechnical applications, a short explanation of resistive FCL principle and a world review of the running FCL projects were given. Finally, the objectives and benefits of our Fast Grid project were shared with the audience. The two page questionnaire prepared for our End users board was presented and rapidly review. The presentation is self-explaining and can be found on [Fast grid Confluence](#).

Next steps

1. Send the presentation to the participants (E-mail list page 2)
2. Organize a 2nd meeting at RSE (Milan) on December 13th-14th after Best Paths TC to explain in detail the questionnaire
3. Select some key End users to involve in our End users meeting

List of End Users

Organisation	Name	E-mail Address
RTE	Olivier Despouys Jean-yves Astic Pierre Meyer Pierre Rault	olivier.despouys@rte-france.com jean-yves.astic@rte-france.com pierre.meyer@rte-france.com pierre.rault@rte-france.com
